

Write your own McStas component

- **Aim:**
- Write a component that models a semi-permeable mirror. i.e. a mirror with scalar reflectivity < 1, which also uses focused sampling.
- **Hints:**
- Step by step instructions in README on github / Thursday – item 2
https://github.com/mccode-dev/Schools/blob/master/2025/ISIS_November_2025/3_Thursday_November_6th/2_Writing_a_component/README.md
- Start with the **Arm** – copied in place for convenience.
 (it has most of the McStas structure present already.)
- Focused sampling is governed by:

$$\pi_i = \frac{P}{f_{mc}}$$

π_i : weight multiplier

P : physical probability

f_{mc} : Monte Carlo probability
